

FASTER DELIVERY – FROM NOW ON

OUR SERVICE FOR YOUR
ZE SCREW-ELEMENTS

KraussMaffei
Pioneering Plastics

SHORTER LEAD TIMES FOR ZE SCREW ELEMENTS

STANDARD SCREW ELEMENTS NOW AVAILABLE WITHIN 10-12 WEEKS

Optimized spare parts service

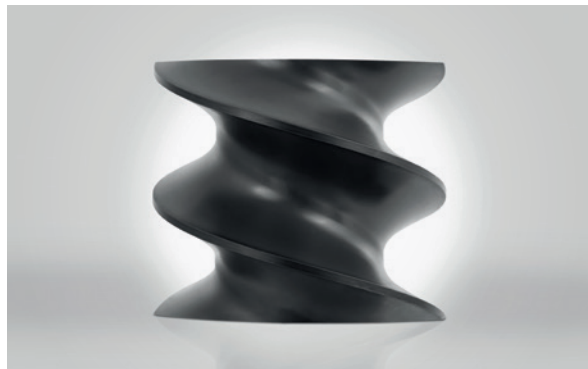

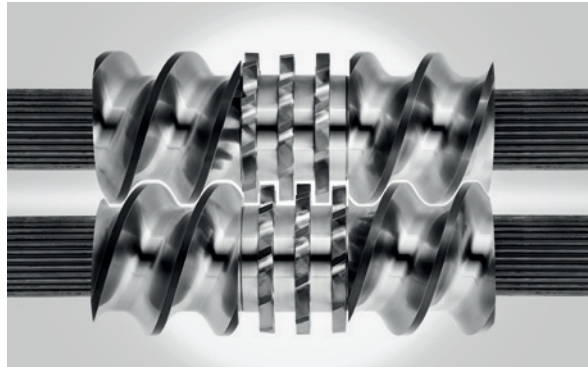

KraussMaffei's highly professional spare parts service often saves customers in emergency situations. A comprehensive portfolio of original spare parts, instant availability and fast order processing ensure that customers are able to resume production with minimal delay to avoid long downtimes. Against this background, it is our top priority to meet ever more challenging demands in terms of reaction and delivery times and focus on continuous optimization of our spare parts management. In line with this maxim, we have realigned our spare parts service to changing global market requirements and customer expectations and consequently invested several million Euro in expanding our production capacities and building up inventories.

Shorter delivery time for higher availability

As a result of this strategy, our customers can now benefit from substantially reduced delivery times for about 90% of our screw element portfolio for the ZE-UT, ZE-UTX and ZE BluePower twin-screw extruder series. The previous lead time of 16-18 weeks for Z9, Z10, Z44 and Z55 materials will be reduced with immediate effect. From now on, the delivery time for all standard screw elements is 10-12 weeks and has thus been shortened by over 30 percent. In addition, we have extended our inventory of off-the-shelf parts, so that customers will also benefit from a substantially higher percentage of instantly available screw elements.

Put us to the test!
